

Asset Tracker

TRACK YOUR ASSETS...
KNOW WHERE THEY ARE AND
WHO HAS THEM!

Asset Tracker provides a method to manage an organization's capital assets. Furniture, office equipment, computers or any item of value can be assigned an ID and tracked. Individual items or "assemblies" may be entered into the database. With *Asset Tracker* you will always know what you have, where it is, who is responsible for it, how much it cost, and it's current value.

Asset Tracker is ideal for large companies, government agencies, and educational institutions. Bar code printing is supported, as are most bar code wands, scanners, and remote entry terminals. With just a touch of a key, the status of any given item is instantly known. With *Asset Tracker*, you will greatly reduce the incidence of "lost" items, and save many hours of searching for items when it is time to take inventory.

QUICK TRANSACTION ENTRY:

- ◆ Browse style transaction entry and editing.
- ◆ Quick asset and department ID look up and on-line help.
- ◆ Add items, individuals, locations "on-the-fly".
- ◆ Streamlined user, department, location, asset entry for quick initial setup.

WITH A FEW SIMPLE KEYSTROKES...

- ◆ Browse through the list of all items, and instantly display current information, including location, current value, assigned user, and more.
- ◆ Retrieve a full history of any item.
- ◆ Know the exact depreciated value of any item, or total value of all items.
- ◆ Know which items are still covered under warranty or service contract.
- ◆ Find items by serial number, model/part number, user or location.

QUICKLY GENERATE REPORTS:

- ◆ All users of a specified item.
- ◆ Items at a particular location.
- ◆ Items assigned to a particular individual or department.

- ◆ Monthly receiving report, physical count list.
- ◆ Discrepancy report to reconcile on-hand vs. counted quantities.
- ◆ All reports may be directed to the screen, printer or text file.
- ◆ Send reports to screen, printer or file.

SPECIAL FEATURES:

- ◆ Bar code printing included in program.
- ◆ User definable fields/screen, allow customization.
- ◆ Upgradable to include on-line workorder, maintenance tracking.

SPECIFICATIONS:
