

# Maintenance/Calibration Manager

TRACK MAINTENANCE SCHEDULES...  
KNOW WHEN AND WHAT TO DO!

Take control of maintenance schedules and work orders. **Maintenance / Calibration Manager** provides a method to manage capital assets that require periodic or scheduled service. "On-line", paperless work orders can be created and tracked. Individual items or "assemblies" can be managed easily. With **M/C Manager** you will always know what you have, when it needs to be serviced, and it's warranty coverage. Service costs associated with an item - past, present and future are easily calculated. Remote bar code data collection is supported. Bar code printing is built-in.

With just a touch of a key, the status of any given item is instantly known. Because *Maintenance / Calibration Manager* includes the full *Asset Tracker* program, it will act as a complete capital asset manager also. If by using this program, even one loss or theft can be prevented, it may pay for itself. If system damage is prevented, it may pay for itself several times. Save hours by using remote bar code readers to take an inventory of all capital assets.

## QUICK TRANSACTION ENTRY:

- ◆ Browse style transaction entry and editing.
- ◆ Quick Item ID look up and help.
- ◆ Add items, users, departments "on-the-fly".
- ◆ Access Levels allow controlled access to functions according to privilege.
